

Hands on Containerisation

Docker & Docker Compose

Building, running, image repos, volumes,
persistent storage, networking, security,
debugging, multi-stage, best practices

Docker Workshop... Please head over to the Armakuni Github

<https://github.com/armakuni/fidelity-docker-workshop/>

Learning objectives

- A mental model of how containerisation works
- How Docker can compliment modern software practices
- Feel confident on your CLI usage of docker and Docker Compose
- How this can be useful in your developer workflow
- How docker will give consistency across your teams
- Confidence knowing the workload running on your laptop, will run the same as it would on a server, or cloud service
